*There's no match for a Western Interior Door*  
Our doors feature additional dowels pins and LVL stiles preventing warping as well as thicker veneers assuring a more consistent finish. Better construction — better doors.

*Poplar compared to Select Poplar*  
This type of Poplar has more color variation than the Select Poplar, but with the same fine texture. This variety of Poplar is perfect for staining the color of your choice.

# PREFINISHING

*Our service. Your aesthetic.*

## *How we finish doors*

We're proud to offer an expansive, colorful palette of stock and custom stains to suit every decorative style and taste.

We utilize durable, water based top coats to ensure a finish that is attractive and environmentally friendly.

Using both hand-wiped and spray on processes, our prefinishing capabilities yield an even application and rich appearance.

## *When field finishing*

Protect your door from soiling, damage and moisture prior to finishing.

Lightly sand all surfaces of the door (180 grit or finer) with the grain to avoid scratches.

Clean your door thoroughly after sanding to remove all dust.

Wood is a natural product and different species will accept finishes differently. Additionally, a barber pole effect, between veneers, is natural and stain may appear to vary to some degree.

Apply a compatible finish, according to its instructions, before final hanging.

Make sure all surfaces, including edges are sealed/finished.

Allow for enough dry time according to your stains instructions.

Be careful not to scratch the glass when removing protective film after finishing French doors.
